

Assignment Buurttuin Biodivers

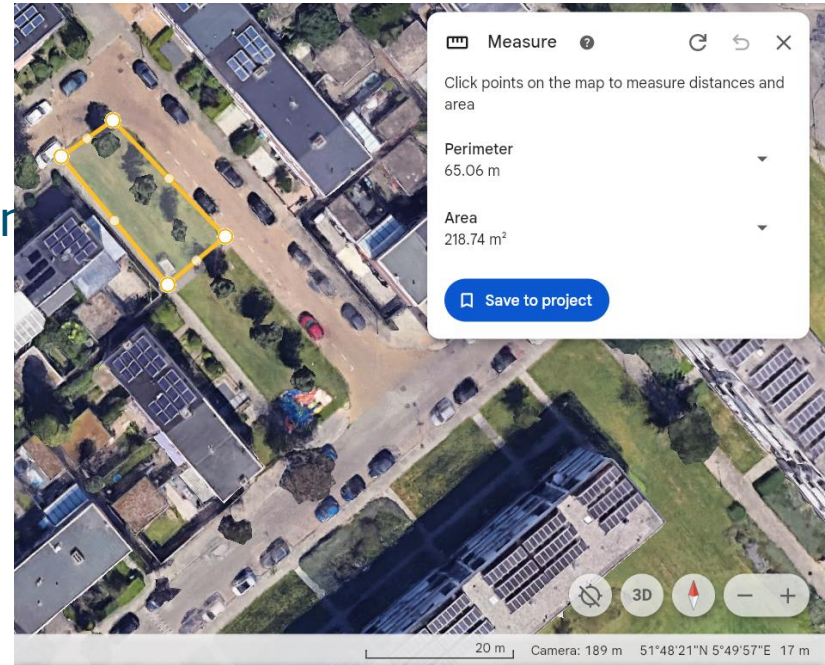

Creating a biodiverse neighbourhood garden to connect people and nature and to improve our quality of life

Michiel in 't Zandt & Jenny Tanaka – Albardastraat, Nijmegen

Introduction and ideas

- **Location**: Albardastraat, Nijmegen
- **Surface**: 220 m²
- **Objective**: a more (diverse) location in the neighborhood for plants, insects, birds, hedgehogs and for the street to connect
- Idea submitted to the neighborhood plan (wijkplan) – there is a budget feasible request? 2k€

Plans and prerequisites (but nothing is set in stone!)

- The three trees (maple) have to be integrated with the plan
- Place hedgehog hotels, insect hotels and bird houses (a neighbor is willing to build them – he can use tips and tricks)
- Layers in the vegetation: keep a semi-open system, so neighbors keep an overview of what is going on
- Plants and flowers: preferably endemic, flowering from late winter to late autumn
- Maintenance: has to be doable, the neighbors have to do this
- We would like to have a visual sketch to present to the municipality
